## **ABSTRACT**

This invention relates to new use of marine cyano bacterium *Lyngbya*, *Oscillatoria*, *Sprulina*, *Anabaena* and *Synechocystis* being deposited with ATCC having accession no ....... for the removal of calcium ions from sea-brine and sub-soil brine having density range 10 to 25.5°Be', said use comprising culturing the cyanobacteria, inoculating the said cyanobacteria culture to raw brine of 10 to 25.5°Be', filtering the resultant mixture to obtain a brine having less calcium and to separate the cyanobacteria which can be reused if desired.

## TITLE

An Improved Process For The Removal Of Calcium Ions From The Brine By Marine Cyanobacteria
